- Energetic
 - Self-motivated
 - Detail oriented
 - Critical thinking
 - Team player
-

DEVELOPMENT EXPERIENCE

Back End Developer

11/2014 – 05/2015

FawkesFX

Worked with a team of graphic designers, front end developers and a project manager on a wide range of projects to ensure timely delivery of websites to clients.

- Developing back end functionality of applications and websites.
- Leveraging the Laravel framework to provide a highly maintainable web application at <http://www.fawkesfx.com>
- Communicating with clients and third parties to facilitate smooth transition to new websites.
- Migrating websites and databases from stage server to production server.
- Writing JavaScript to communicate with the back end and to enhance client side functionality.
- Reviewing peer work to identify and correct potential issues.
- Utilizing PHP to create search engine friendly URLs and PHP + JavaScript to create a leads management system on <http://www.reliablemobilelabs.com>
- Administration of stage and production servers.
- Custom WordPress theme and plugin development.
- Managing DNS records to ensure proper functionality of all systems and client websites.

Front End Developer

4/2013 – 11/2014

Dealer Spike

Worked with a team of back end and front end developers as well as support agents to deliver websites and email service to clients while serving as a resource to staff.

- Communicating with clients and third parties to resolve issues and implement new features.
- Knowledge of HTTP request/response process.
- Utilizing knowledge of HTTP request/response process to pinpoint etiology of issues.
- Developing websites using HTML, CSS, JavaScript, jQuery and ASP (VB Script).
- Management of DNS records.
- Knowledge of real-world development process.
- Knowledge of payment processors and regulations.
- Knowledge of email server administration.
- Knowledge of DNS system.
- Reviewing peer code to identify and correct potential issues.
- Troubleshooting and resolving issues in web applications.
- Debugging code in web applications.

Freelance Developer

4/2007 – Present

Self Employed

Work by myself to provide websites, applications and consultation to a variety of clients. My portfolio is located on my personal website at <http://justinc.me>.

- Communicating with clients and third parties to facilitate all aspects of the web development process.
 - Debugging/reviewing code on websites and in third party vendor packages.
 - Developing websites using PHP, MySQL, HTML, CSS, JavaScript and jQuery.
 - Custom WordPress theme and plugin development.
 - Management of DNS records.
 - Set up and maintenance of web servers.
 - Ongoing maintenance of websites and applications.
-

EDUCATION

The Art Institute of Pittsburgh

2007 - 2011

Pittsburgh, PA

- AAS Web Design & Interactive Media

SIDE PROJECTS

fooCart - <https://github.com/justincdotme/foocart>

fooCart is an ecommerce application that I built on Laravel 5 in my free time. The application includes a shopping cart, inventory management system and payment processing integration. I utilized the Handlebars JS library for client side templating of the inventory list. The administration interface features an inventory management module, user management module, slideshow management module and message management module.

BookMe - <https://github.com/justincdotme/bookme>

BookMe is a personal project that I built in my free time using PHP5 and MySQL. The goal of this project was to create a fully functional property booking application from scratch using MVC architecture. The public site features property listings, a property availability module and a reservation booking module. The administrative interface features a user management module, a reservation management module and a property management module. The property management module comes complete with a rich text editor and image uploader.

PORTFOLIO

My portfolio is available on my personal website at <http://justinc.me>.
